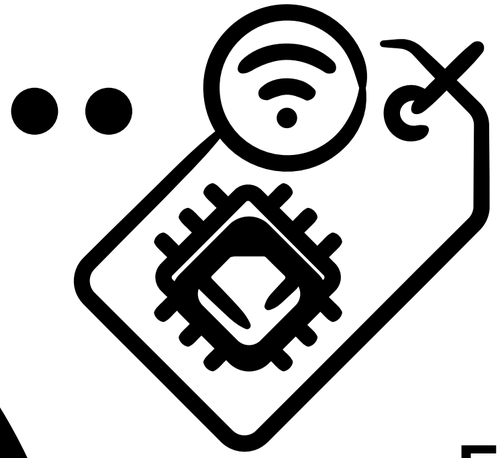
A BRIEF DESCRIPTION OF THE

SMART ATTENDANCE SYSTEM

#ESP32

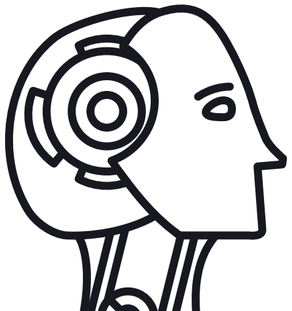
This is an ESP32 based Attendance System that uses RFID technology. This is a type of technology that can change the future of Attendance taking, especially in school. This system reduces manual work, avoids mistakes, and provides a faster and more modern attendance method.

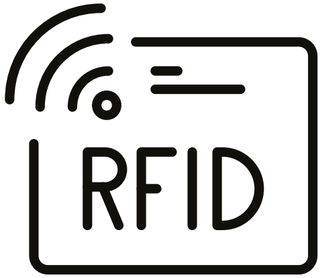
: Jash. :

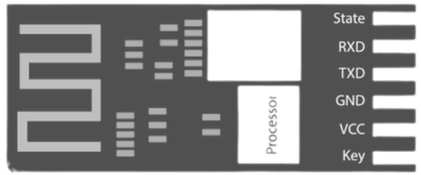


Each student will receive a personal RFID card which will replace the regular school ID card.

The RFID Card has its own UID chip which stores the variable's information, here, its the name of the student.







When a student taps their card on the RFID reader, the ESP32 will record the time and automatically generate an Excel Sheet with complete attendance details

After generating the sheet, it will automatically emailed in GMail through ESP and additionally, a Telegram Message will also be sent for the second verification.

Thank You :)
